# WHAT'S INCLUDED

Axel Single System

DOOR CONFIGURATION: BI-PARTING

- Common for installations with limited wall space or high usage
- Two door panels
- A single sliding door track made of either one continuous track or two joined tracks, depending on length.

Sliding doors are an iconic and useful element in modern design. They minimize dead space caused by door travel and are better for ADA access. The Bi-Parting Door Configuration is a great solution for high-traffic rooms with limited wall space. Because there isn't a single large panel, tracks need only extend a little more than half the width of the opening on each side. This allows for sliding doors to be installed in large door openings with less wall space. Bi-Parting is very popular for business conference rooms where there is high traffic into and out of meetings. Doors have a variety of defaults. Leave both open, only one side or the other open, or open both to a degree. Also, Bi-Parting door solutions adapt well to low-traffic use with people able to use only one door or the other as needed.
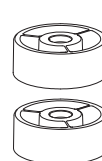

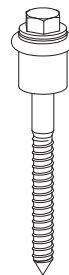

TRACK

Track assembly

x 1

Includes one complete track assembly. This will either consist of one continuous length of track or two joined tracks, depending on length.

FASTENERS

Flush Mount Track Kit
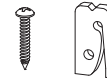

x 2 - 4*
